

Workshop Setup Instructions

Spring Boot with Coroutines and Virtual Threads

Workshop Setup Instructions

As follows the setup instructions for the *Spring Boot with Coroutines and Virtual Threads* workshop @ KotlinConf 2026.

Please ensure that you have your environment up-and-running before the workshop starts, so no time is wasted on env issues.

If there are any questions let me know, I'm glad to help:

- Urs Peter / upeter@xebia.com

CU soon for an inspiring day dedicated to reactive Spring Boot and Kotlin's Coroutines topped with Virtual Threads!

Setup Instructions for IntelliJ

- Make sure you have JDK ≥ 21 installed
- Make sure you have the latest version of IntelliJ installed
If not: download IntelliJ here - the community edition is sufficient:
 - <https://www.jetbrains.com/idea/download/#section=windows>
- Import lab sources (*also see screenshots*)
 - Download and unzip:
 - <https://bit.ly/kotlinconf-springboot-workshop-labs-2026>
 - Import Project in IntelliJ:
 - File -> Open-> select lab root directory -> Ok
 - You can either choose for maven or gradle. The choice is yours.
 - From within the IDE make sure you can run all tests.
 - The tests will *fail* for now - at the end of the workshop they will all be green  

Screenshots Project Import in IntelliJ

1

Welcome to IntelliJ IDEA

Search projects

New Project Open Get from VCS

2

Select the root directory of the labs project.

kotlin-springboot-corout...

3

Open or Import Project

Found 2 project configurations in 'kotlin-springboot-coroutines-workshop-labs'.

Open as:

- ☒ Maven project
- ☐ Gradle project

Cancel OK

Choose either maven or gradle, whatever you like best.

Reformat Code ⌘F

Optimize Imports ⌘O

Delete...

Build Module 'labs'

Rebuild '<default>' ⌘F9

Run 'All Tests' ⌘R

Debug 'All Tests' ⌘D

More Run/Debug

Open In

Make sure you can run all tests (though they fail for now).

Troubleshooting with Gradle Setup

Should you have chosen for gradle and you get weird errors, ensure you use the right Gradle JVM version configured.

Preferences -> type: Gradle -> select JVM >= 21 -> Ok
